Bag-Valve-Mask (BVM) resuscitators

Anaesthesia • Resuscitation and Emergency Care

Quality, innovation and trust

High quality design used worldwide

Established for many years, the Intersurgical BVM resuscitator is used worldwide, as an essential piece of emergency resuscitation equipment.

Designed for ease of use, the Intersurgical BVM resuscitator is available in a full range of sizes: Adult (1.5 litre), Adult (1 litre), Paediatric (550ml) and Infant (280ml) sizes. The high quality, robust construction provides the reliability needed to withstand use in all scenarios.

Supplied as a fully assembled single use product, the BVM resuscitator is always ready for use in an emergency situation, thus avoiding the issues associated with reusable BVMs, including the risk of cross infection and the potential for components to be lost or misassembled following reprocessing.

BVM resuscitators are single-use and latex free.

Designed to optimise product performance

The textured bag with integrated handle improves grip for easier use in scenarios where only one user is present. Excellent recoil properties ensure the bag is ready for subsequent patient ventilations, and its transparency allows a clear view of the product and valves in use.

All Intersurigcal BVM resuscitators have three meters of kink resistant oxygen tubing as standard and a 360° swivel between the mask and valve to allow the BVM resuscitator to be held in a convenient position.

The product packaging is fully flexible which doesn't restrict storage in areas where space is limited and 40cm H_2O pressure relief valves are featured on the 1 litre, 550ml and 280ml BVM resuscitators.

The clear face mask allows excellent patient visibility and features a valve to optimise the seal, which is positioned on the top of the mask for ease of use. A standard 15F/22M connector allows the attachment of alternative face masks and endotracheal tubes or supraglottic airways as required.

Additional accessories available

A PEEP valve adaptor is available which allows the attachment of a PEEP valve to the BVM resuscitator, and an inline manometer is also available which can be incorporated into the resuscitation system.

Bag-Valve-Mask (BVM) resuscitators
